DeadlineGuard

Assignment upload demonstration / 20 MiB

DEMO FILE - NOT A REAL STUDENT SUBMISSION

Course: CS204 - Operating Systems

Topic: Reliable submission near a deadline

What this file demonstrates

1. Start an authenticated upload before the deadline.
2. Watch the server acknowledge numbered chunks.
3. Disconnect the demo connection; saved chunks remain.
4. Reconnect and send only the missing chunks.
5. Click Finalize submission to verify and issue a receipt.

Transparent test padding

This PDF includes an embedded demo-padding.bin attachment.

It contains inert test bytes to make transfers visible during a viva.

It is not additional coursework, executable code, or a real scan.

Exact size: 20,971,520 bytes (20 MiB).

At 512 KiB per chunk: 40 chunks.

20 MiB example: 24 saved chunks = 12 MiB; 16 missing = 8 MiB.

Deadline policy

A five-minute recovery window allows the same session to finish

after the deadline. The receipt is marked grace recovered.

A hash commitment protects integrity, not proof of possession time.
